Dear FCC,

I support the petition to require VRS interoperability because I am frustrated
with the complications of calling people on videophone.

I don't like that VRS can be blocked from accessing the provider of my choice.
It is very important to make all video equipment equally accessible by setting
up one system just like the telephone.

Waiting a long time for a VRS agent is not equal to hearing people and can put
me at risk in emergency situations. To improve the speed of agent answer, please
don't allow VRS providers to block my right to choose any VRS provider I want.

Thank you,
Brenda
